

ASGE UPDATE

ASGE Launched *iGIE*, New Online-Only Journal

iGIE is a new gold open-access, online-only journal that accelerates the publication of peer-reviewed research and best practices in the field of GI endoscopy, particularly work conducted collaboratively and across disciplines that provides insight into future practices. The overarching focus of *iGIE* is to encourage visionary thinking in the gastrointestinal field by publishing novel preclinical work and early clinical studies.

iGIE is divided into six major sections:

- innovations
- investigations
- insights
- informatics
- interdisciplinary
- international

iGIE will be published on a quarterly basis. To submit an article and to read the latest issue, visit iGIEJournal.org.

Join Us for a New One-of-a-Kind Course - *Women Teaching Women: Retooling Your Clinical Toolbox*

Designed by women for women, this brand-new course, taking place March 3 in-person at the IT&T Center, will enable female gastroenterologists to become more knowledgeable, skilled, and successful clinicians.

Using an effective mix of didactic lectures and hands-on simulation training, some of the leading women faculty in the GI field will address the latest endoscopic tools and techniques—including treatment of esophageal disorders to polypectomy/EMR, controlling bleeding, defect closure, ergonomics of endoscopy, and more. Plus, every participant will leave this course with a custom toolbox of resources that will meet their individual needs, includ-

ing a checklist for how to incorporate new ergonomic and endoscopic techniques into their practice.

If you're a female gastroenterologist who wants to learn from leading women in the field how to refine your endoscopy skills and techniques, register for this course today at ASGE.org/WTW.

Sign Up for ASGE STAR Certificate Program—*Fundamental Suturing*

Increasing interest in endoscopic mucosal resection (EMR), endoscopic submucosal dissection (ESD), natural orifice transluminal endoscopic surgery (NOTES), and peroral endoscopic myotomy (POEM) has led to the use of endoscopic suturing to close partial and full-thickness defects. These procedures are performed for a variety of indications where approximating tissue is desired, including fixation of stents, closure of defects, and bariatric applications. This ASGE STAR program course leverages common techniques and devices to perform endoscopic suturing—providing the training that is needed to become proficient in its clinical use.

This course, taking place March 25–26, is available both in-person at the IT&T Center and virtually. In-person participants who successfully complete a knowledge and skills assessment evaluation will receive a certificate of completion, while the virtual option is designed to enhance participants' endoscopic clinical knowledge.

In-person participation is limited to 40 physicians, so register early at ASGE.org/STAR.
